LABEL & RECEIPT PRINTING

SCALES

Supermarkets - Fruit Shops - Butchers

ISHIDA
UNI - 5

Interfaces

The Uni-5 comes with several interfaces as standard: A) RS232 for self-service 2 or 3 panel keyboards connection or serial barcode scanner B) Ethernet (100Mbps) for connection with PC and connection with other scales (floating operator system) C) USB for memory expansion up to 2GB or barcode scanner connection D) RJ port for cash drawer connection Wi-Fi is available as an option and may be ordered either as a kit or as built-in factory option before placing order.

Printer

The direct thermal printer with side-loading system on the Uni-5 has a variable speed which can be set via software between 80, 100, 120 and 150mm/sec. The printer comes standard with the backing rewinder thus ensuring you can switch-over from labels to receipt or vice-versa. The peel sensor which is standard too on all Ishida retail scale printers will make operation easier, faster and helps minimise label waste. The Uni-5 printer is designed with the environment in mind - Linerless printer is available and may be ordered as standard or as a kit in order to be able to print receipt or labels on linerless continuous rolls.

Customer display

A sharp, bright, grayscale 7" LCD with backlight helps attract customers' attention. Brightness is software adjustable and to further reduce power consumption, standby mode may be set to trigger automatically. The customer display can show scrolling/ flashing advertising messages and up to 6 images per A/D message with variable selectable speeds. A/D messages may also be set to switch to full-screen in order toensure maximum visibility.

Touch Panel

The 7" touch panel makes scale operation as easy as playing. The display consists of a neat format multi-window layout for tare, weight, unit price and total price positioned vertically on the righthand side of the display, PLU name window and icons to easily identify the scale connectivity status/printing mode/USB port. Up to 3 sizes of preset keys may be programmable with the small size capable of accommodating up to a maximum of 20 freely programmable preset keys on a single page. The Uni-5 can store up to 99 pages and each can be set as category/ group/ function/operator/ PLU page. Further more, the operator display may be utilised to view virtual receipts, open tickets, visualise totals before printing and easy label formatting.
